The skills I use most in my job...Networking Knowledge

- Project Coordination

The most interesting thing I've worked on in my career so far...Surveying and Installing Wireless Antenna on rooftops, then the complete opposite and assisting fibre cable installing underground and seeing how much a difference my help on a day to day basis assist my customers to make the most out of their businesses.

What inspired me into digital and tech...Technology is something in the world that will forever be changing and improving, there will always be something better and something extra to learn and develop. This is both interesting and exciting to see what technology is actually capable of.

My educational background is...Studied Sports and Nutrition, Psychology and Sociology in College - i

developed by professional skills by my roles in the latest two roles ive worked in. I always wanted to learn more and sat with colleagues who could expand my knowledge further than my particular role.

What advice I'd give to girls thinking about a career in digital and tech...In other jobs, there is always a limit to your role unless you study again or complete another degree, in technology its forever improving and changing and improving so you will always be learning something new and developing yourself.
